Education

Esade Business & Law School, Universitat Ramon Llull — Barcelona, Spain 09/23 – 06/28
Double Degree in Business Administration and Artificial Intelligence

- Relevant coursework: Advanced Mathematics, Distribution Theory and Statistical Inference, Optimisation and Computational Modelling, Data Structures and Algorithm Design, Software Development, Database Design and Management, Introduction to Artificial Intelligence, Machine Learning, Deep Learning, Cloud Solutions, Data Visualisation

Experience

Oncoviva (MedTech) — Remote 07/26 – 08/26
Data and Business Strategy Intern

- Automated the audit of complex strategy documentation with an AI-assisted workflow based on structured instruction files, ensuring internal consistency before investor review.
- Structured and processed heterogeneous, unstructured HealthTech data to estimate adoption curves and build predictive customer-acquisition models for scenario planning.
- Built reproducible financial sensitivity models and structured the Virtual Data Room analytics for investment committees.

Esade MBA, MKT & MSM, MIM & FIN, AI Bootcamp — Barcelona, Spain 10/26 – 11/26
Teaching Assistant

- Supported students from the MBA, MKT & MSM and MIM & FIN programmes in hands-on labs on agentic AI tools: Claude Code, Codex, Antigravity and Kiro.
- Helped students create and apply skills, subagents and instruction files to automate recurring workflows.
- Guided them in building agents, connecting external services through connectors and MCP, scheduling tasks with schedulers and deploying their automations.

Technical Skills and Languages

Languages and Data: Python (Pandas, NumPy, Scikit-learn), SQL, Snowflake.
AI & Machine Learning: PyTorch, Hugging Face, LLM APIs, Agentic AI (Claude Code, MCP, subagents), Fine-tuning.
Automation and Cloud/DevOps: n8n, Git, Docker, AWS, Azure.
Visualisation & Tools: Streamlit, Gradio, Power BI, PowerPoint, Excel, Matplotlib, Seaborn, Notion.
Languages: Spanish (Native), Catalan (Native), English (C1 / Fluent), German (Basic).

Projects

AI Maintenance Tool for Solar Panels — PyTorch, Hugging Face, Gradio

- Built an end-to-end application where users upload images of solar installations and instantly receive a dust diagnosis, maintenance logs and energy production forecasts.
- Fine-tuned a Vision Transformer (ViT) for detection and added an LLM layer (Llama 3.3) that converts efficiency loss into localised financial impact.

Hotel Booking Cancellation Prediction — Python, Pandas, NumPy, Scikit-learn

- Predicted booking cancellations on 80,000+ records with automated data cleaning, imputation and feature scaling pipelines.
- Benchmarked KNN, Decision Tree and Logistic Regression models, selecting Random Forest with 91% precision.

Privacy-Preserving Customer Acquisition Model — Python, Federated Learning, Streamlit

- Predicted subscription uptake with federated learning (FedAvg) without centralising customer data, ensuring data sovereignty and privacy compliance.
- Handled class imbalance with SMOTE and built a Streamlit dashboard to monitor model performance.

Additional Information

- Matrícula de Honor (highest distinction) in Introduction to Quantum Information, first in cohort.
- Data Scientist in Python certification (DataCamp), in progress.
- Member of Enode: research on Transformers and modern AI systems and a year-long applied AI project.
